PROFILE SUMMARY

Bachelor's Degree in Information Technology with practical experience developing React and Node.js projects; Skilled at designing and incorporating secure JWT-based and token-based RESTful API endpoints (Node.js/Express.js, Django REST Framework), along with React/TypeScript frontend interfaces, role-based authentication/authorisation processes, and query/backend optimisation. Proficient in relational databases, Object-Oriented Programming, Data Structures & Algorithms, debugging of live applications, and module development in Git.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, HTML, CSS

Frontend: HTML5, CSS3

Backend & APIs: Node.js, Express.js, REST APIs

Databases: PostgreSQL, MySQL, SQL, MongoDB, NoSQL, Relational Database Design, Query Tuning

Core Concepts: Object-Oriented Design, Data Structures & Algorithms, Complexity Analysiss, Debugging

Tools: Git, GitHub, VS Code, Antigravity

Languages Known: Tamil, English

INTERNSHIP EXPERIENCE

Backend Developer Intern

iGen Services and Solutions May 2026 – Aug 2026

● Built backend systems using Node.js and PostgreSQL, designing relational database schemas and implementing modules user administration, and authentication.

● Developed and integrated RESTful APIs with Node.js, including route handlers, request validation, and permission-based access control, with token-based authentication securing API endpoints.

Database Developer Intern

AR Technologies Jan 2025 – Nov 2025

● Supported relational database schema and software design for multiple interconnected web applications accessed by admins and corrected data integrity problems to ensure consistent and reliable application functionality.

● Collaborated in an agile setting with developers for debugging and optimisation of database schemas throughout an 11-month internship to reduce data integrity problems by 4-6%.

PROJECTS

SAAI Physiotherapy Clinic Management System — *React, TypeScript, Node.js, Express.js, PostgreSQL*

- Designed and deployed the PostgreSQL database for the full-fledged, scalable clinic management system, which was released on the Google Play Store; structured data to support doctors and therapists.
- Created an efficient backend data layer for JWT-secured REST API consumption by a React and TypeScript frontend application that includes role-based access control and PDF/CSV report generation.
- Created efficient schemas for therapist-wise booking, patient life-cycle management, dynamic assessment engine, and treatment planning using concepts of algorithm design and data structures.

Railway Waiting Hall & Clock Room Billing Management System — *C#, React, PostgreSQL*

- Created and implemented a billing system for 3 rail stations (Erode, Tirupur, Coimbatore) with a C# desktop application for transaction operations of the staff and a React administrative panel to monitor the revenue.
- Used secure database integration and a role-based workflow utilised daily by station employees.

Student Management System — *Database Development*

- Designed a database for the placement module of students to be used in connection with the college ERP portal via data flow across both systems.
- Created relational databases for storing data regarding students' profiles, interview schedules, and placement status using an object-oriented and algorithmic problem-solving approach

EDUCATION

Bachelor of Technology in Information Technology

Nandha Engineering College, Erode, Tamil Nadu *Expected May 2027*

- Relevant Coursework: Backend Development, Object-Oriented Programming, Data Structures and Algorithms, Complexity Analysis

CERTIFICATIONS AND WORKSHOPS

- Fundamentals of Python — Infosys Springboard | Basics of MongoDB — MongoDB (Official)
